## Oceans

CSRidentity.com covers oceans which is an important part of water, which required for survival. About 71 % of the earth's surface is water-covered, and the oceans hold about 96.5 percent of all earth's water. Water also exists in the air as water vapor, in rivers and lakes, in icecaps and glaciers, in the ground as soil moisture and in aquifers.

The vast majority of water on the Earth's surface, over 96 percent, is saline water in the oceans. The freshwater resources, such as water falling from the skies and moving into streams, rivers, lakes, and groundwater, provide people with the water they need every day to live.

## Why we cover Non UN member countries, islands...

CSRidentity.com covers humans, nature, living beings and non living things. These are present on planet earth. We plan to cover even the smallest island which has no recognition, but has air, water, nature. Humans may not exist in the island today but in future humans may go in that island either for living or business or transportation purpose. If this becomes a reality one day, then some one must take care of that place today or tomorrow.

Midway was formed roughly 28 million years ago when the seabed underneath it was over the same hotspot from which the Island of Hawaii is now being formed. In fact, Midway was once a shield volcano perhaps as large as the island of Lana'i. As the volcano piled up lava flows building the island, its weight depressed the crust and the island slowly subsided over a period of millions of years, a process known as isostatic adjustment.

Of the 1.5 million Laysan Albatrosses that inhabit Midway, nearly all are found to have plastic in their digestive system. Approximately one-third of the chicks die. The reasons for these deaths is attributed to the albatrosses confusing brightly colored plastic with marine animals (such as squid and fish) for food.
